

WHAT YOU NEED TO KNOW ABOUT 5G

While a rapid 5G rollout continues across the UK, there are still doubts around the service, its costs and its availability. Let's debunk the myths and take a closer look at the data...

300+

5G is active in over 300 towns and cities, offering 30% population coverage.¹ Most of the UK is expected to have 5G by 2023.²

Myth debunked

5G is not just for cities, it will be available nationwide.

Hi, speed.

Median 5G download speed (Mbps)

Speedtest® Q1-Q2 2021³

Three recognised as the UK's fastest 5G network

Reported by Ookla®

What does it mean?

5G can be four times faster than the UK average fixed broadband speed.⁴

Is 5G really better than 4G?

100x faster

5G offers predicted speeds of up to 10Gbps. That's up to 100x faster than 4G.¹

1000x more capacity

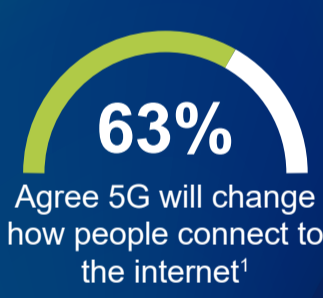

With 5G, you can use more connected devices concurrently than ever before and remove any network capacity restraints.¹

What does it mean?

No more buffering or frozen screens on video calls - even if hundreds of people are using their devices simultaneously.

What do consumers think?

18% of global consumers are unsure if they have a 5G capable device.¹

Four in ten are likely to get a 5G tariff in the near future.¹

Myth v Most 5G tariffs cost the same as 4G.

What's 5G's value for businesses?

Response **Speed**

Great for remote working and VPN access, as well as industrial monitoring, drones or autonomous robot vehicles.

High **Capacity**

Great for reliable video conferencing and video calls, or video surveillance with high resolution security cameras.

High **Device volume**

Great for IoT applications in smart cities, asset tracking, eHealth and consumer devices.

If you're looking for a signal, this is it.

When it comes to the benefits of 5G, we've barely scratched the surface.
